S.J. cops checking on reports of laser pointers on I-680

By **LESLIE GRIFFY** | Mercury News, Bay Area News Group
January 15, 2007 at 1:38 p.m.

San Jose police are looking for two men who pointed lasers at highway traffic on Monday night, a California Highway Patrol dispatcher said.

Drivers calling CHP reported small laser lights coming from an overpass at Berryessa Road onto Interstate 680 around 5:46 p.m.

According to CHP, witnesses said two people on the overpass pointed the lights at cars in the slow lane. The CHP forwarded the case onto San Jose police.

The incident comes exactly a month after Santa Clara County Sheriff's deputies searched unsuccessfully for someone who pointed green laser lights at planes as they came into land at San Jose International Airport.

On Dec. 11, over the span of just two hours, someone shone the light into the cockpit of at least four airplanes. Santa Clara County Sheriff's deputy Serg Palanov called that incident "serious."

In January 2005, federal authorities charged a New Jersey man accused of temporarily blinding a pilot by shining a laser light from the ground into the cockpit with interfering with the operator of a mass-transportation vehicle using the Patriot Act.

Terrorists and Laser Weapons Use: An Emergent Threat

NCJ Number: 223262

Journal:
Studies in Conflict & Terrorism Volume: 31 Issue: 5 Dated: May 2008 Pages: 434-455

Author(s): Robert J. Bunker

Date Published: May 2008

Length: 22 pages

Annotation
This article describes and analyzes trends in terrorists' use of laser weapons and offers concluding thoughts about the future in this arena.

Abstract
Laser weapons have numerous advantages over conventional weapons. These include the speed of light; energy concentrated on the target; straight line of flight; extreme standoff potential; silence; invisibility (if infrared); no requirement for large quantities of ammunition; unique wounding of the eyes, charring, and lacerations; and debilitating psychological impact. The seriousness of the emergent threat of terrorist laser weapon use has grown steadily over the years due to a variety of trends. These include the military transition from conventional weaponry to directed-energy weapons, recognition of the tactical and operational advantages of laser weapons, and reduction in laser costs and increases in performance. From organizational, legal, religious, and ethical perspectives, terrorists have no qualms about using laser weapons. Terrorists achieve accessibility to sophisticated weaponry through interactions with various criminal networks and rogue states, such as drug cartels, insurgents, mercenaries, arms merchants, other terrorist groups, and state sponsors of terrorism. For the future, the author's best guess is that it will be 3 to 5 years before laser weaponry will be in the hands of terrorists. He advises to begin planning for this future terrorist weaponry-use contingency. 37 notes

that Louisiana can use the One Drop Rule to make their voting maps, giving them a second Black district, by counting all the Mixed people under the Black Voting Age Population. Then, you have the current nigger rap feud between a afro-semitic Canadian jew industry plant rapper and literal golliwog ass negroes with Mulatto whores on their arms, which led to an anti-Mixed song, "Not Like Us," gaining traction. America has shown time and time again that even Blacks and Whites can come together in peace and in harmony – when against our kind and our people.

I am seeing that America will cling to the One Drop Rule at all costs, despite Loving v. Virginia ruling it illegal and unconstitutional. Plecker and Naomi Drake must be laughing in hell together. I am seeing that Mulatto, mixed women, fuck Black men and varsity White boys as if it is an Olympic sport. I am sick of seeing anti-Mulatto male commercials, TV shows, stock photos, pornography and movies that depict scenes like this being promoted in the United States by mulatta pussy hungry Black, liberal White and racially Jewish casting directors:

This is Mulatto erasure. This is solely about emasculating and shaming Mulatto men and communicating to them that they are not an ethnic group, are not entitled to Mulatto women and do not have the right to exist. If you look at how America pumps out these commercials, shows and films, left and right; How they cling to the One Drop Rule despite it being ruled unconstitutional in 1967, you begin to see a recurrent pattern:

A **Kentucky** mother allegedly admitted to shooting dead her 10-year-old son and stuffing his body in the trunk of her car after trying to cut out his tongue.

Kaitlyn Renee Higgins, 28, was arrested on Tuesday in Louisville and charged with the murder of her son Kyon Higgins Jr.

Officers with the Louisville Metro Police Department were dispatched to Higgins' home after receiving a call from a neighbor who said she saw the mother with a gun and the boy who appeared lifeless wrapped in a blanket, according to an arrest report.

Point B – Causing Harm To The Group

Mom sues Southwest Airlines, saying she was accused of trafficking biracial daughter

Mary MacCarthy says she and her child were questioned by police after a flight.

By Armando Garcia and Katie Kindelan abcNEWS
Tuesday, August 8, 2023

Black father says he was accused of trafficking his biracial sons on flight

By KCAL/KCBS Staff
Published: Sep. 28, 2023 at 4:53 AM CDT

LOS ANGELES (KCAL/KCBS) - A Black father is asking for people to "do better" after he says he was accused of trafficking his own children on an American Airlines flight to Los Angeles.

David Ryan Harris, a musician who has collaborated with the likes of John Mayer, Carlos Santana and the Dave Matthews Band, recently took to social media to tell his story about the incident that rattled his family.

Almost two weeks ago, Harris, who is Black, was flying from Atlanta to Los Angeles with his two sons, Truman and Hendrix, who are biracial. He shared in an Instagram post that when the family got off the plane, four police officers were waiting for them.

(Black, upper case B. biracial, lower case b. What the fuck is with this gay ass cuckold shit from journalists, on a semi-related note?)

New York (CNN) — A federal agency accused a popular gas station chain of discriminating against Black, Native American and multiracial applicants in its hiring practices.

The Sheetz criminal screening process disproportionately screened out applicants from those legally protected groups, the lawsuit announced by the US Equal Employment

(Black, Native American, multiracial. Again, what the fuck. Capitalize all three or fuck off.)

Point C & D – Inhibiting Births In The Group, Inflicting Conditions That Will Destroy The Group In Whole Or In Part

When was the last time you saw hundreds of couples like this in the United States Of America? Or such a couple in a TV show, commercial or movie.

What does the "average" Brazilian look like?

When did you ever see two Mulattos or two Blasians together as a couple in America?
Exactly.

Couples like this don't occur in America, due to centuries of One Drop Rule gaslighting and now, propaganda campaigns in American media.

If you lie enough times, even the victims of the lie will take it as truth and sing praises of it as objective fact.

"I find the term 'biracial' offensive," Cane quoted from the interview. "It's a way for people to separate themselves from African Americans, a way of saying, I'm better than that."

Cane, who disclosed that he too is of mixed parentage, said he didn't care for the term either. Patton told Cane that her point of view hasn't changed.

Berry, 44, is the daughter of a white mother, who was a psychiatric nurse, and a black father, who was a hospital attendant in the same ward. Aubry is French-Canadian and white.

The couple is in the middle of a bitter custody battle over their 2-year-old girl, Nahla.

"I feel she's black. I'm black and I'm her mother, and I believe in the one-drop theory," Berry said in an interview with Ebony magazine.

This only further reinforces points C & D. Especially when the people who espouse these talking points have influence and power.

'We're paying twice for the same experience': Plus-size travelers hit out at 'discriminatory' airline seat policies

By Tamara Hardingham-Gill, CNN

② 9 minute read · Updated 12:12 PM EDT, Mon June 12, 2023

But the media will tell you that fake issues like fat people not getting free shit or men larping as women and being crossdressers while not being seen as their make believe sexual identity are the most pressing social issue of all time in the same country that fights to keep down our real, biologically unchangeable Mixed race identity – every chance that they get. This is why we need our own nation-state.

Misgendering Should Be a Crime, According to Millennials

Published Jul 15, 2023 at 1:07 PM EDT

I rest my case. The Mulatto is an endangered subspecies in this continent, though it is the land of our origin and our ethnogenesis. This land is ours. Only Mulattos should adopt Mulattos. Mulatto men should be with Mulatto women. Few if any White women should be trusted near or in custody of Mixed kids. Mulattos should have had the right to form their own culture and pursue their own racial interests. Racemixing should be fucking illegal and so should racial integration. The Mulatto is the first victim of all of both these things.

I have many other reasons I wanted to write this book but I think these will suffice.

I blame the United States Of America for all of this. For everything. Especially the federal government and all of these Southern state governments. They cry about victims in Ukraine and Gaza and Israel, while we die and suffer in the war at home.

Fuck the United States Of America. Let this book be a reminder to you that Mulattos are a distinct ethnic group who deserve their own country.

To you anti-Mulatto Blacks and you liberal Whites and opportunistic Hispanics, we are not slim pickings or easy targets. When attacked, we will fight back.

To you others who wouldn't even be here if not for the Hart-Cellar Act, let this book show you that you are not welcome in this continent. You are not from here, you have no history here. You do not belong here. Only the Mulattos, the Zambos, the Mongrels, the Blacks, the Whites, the Hispanics and the Natives have a valid case to make for being in North America. You other ethnic groups do not. Get the fuck out and go home. Go back to East Asia, Go back to the Levant. Go back to fucking India. Where you fucking belong.

Lasers As An Area Denial Weapon

Imagine driving at night on a freeway or interstate and all you see is this, followed by this,

Followed by this.

Yeah. That doesn't look so hot :)
I would never want that shit to happen to me or in my country, lmfao.

Imagine the smell of all the charred meat, the iron of the blood, the metal and fiberglass burning, the rubber. Imagine the screams and cries. Imagine the sirens.
Imagine it over and over, night after night, for years on end.

This is the 21st Century. Lasers are a tool you can use to get revenge on your enemies.
All you need are three things:

All you need is a 15W, 20W, or 36W 445nm/450nm CNC Head Laser Module, A DC 12V 9800mAh Li-ion Battery Pack and a pair of 190nm-540nm OD5+ or OD6+ Laser Safety Goggles and you can cause a 10+ car pileup or cause trucks full of diesel, hydrazine, medicine, food, even nukes to crash.

What about in combat against an enemy on the ground?

No problem.

Unlike these antifa faggots who wave around 532nm and 650nm lasers they bought from eBay, the right should do due diligence and actually fucking research lasers so they can do the most harm and have the most success.

Laser safety goggles that strap to your face will fog less. So, you should go for these Laserland goggles instead of Eagle Pair. Eagle Pair's are highly recommended and I recommend them always, even now. However, they do not strap to your face. Wear Eagle Pair goggles with a neck gaiter or a balaclava and your goggles will always fog up.

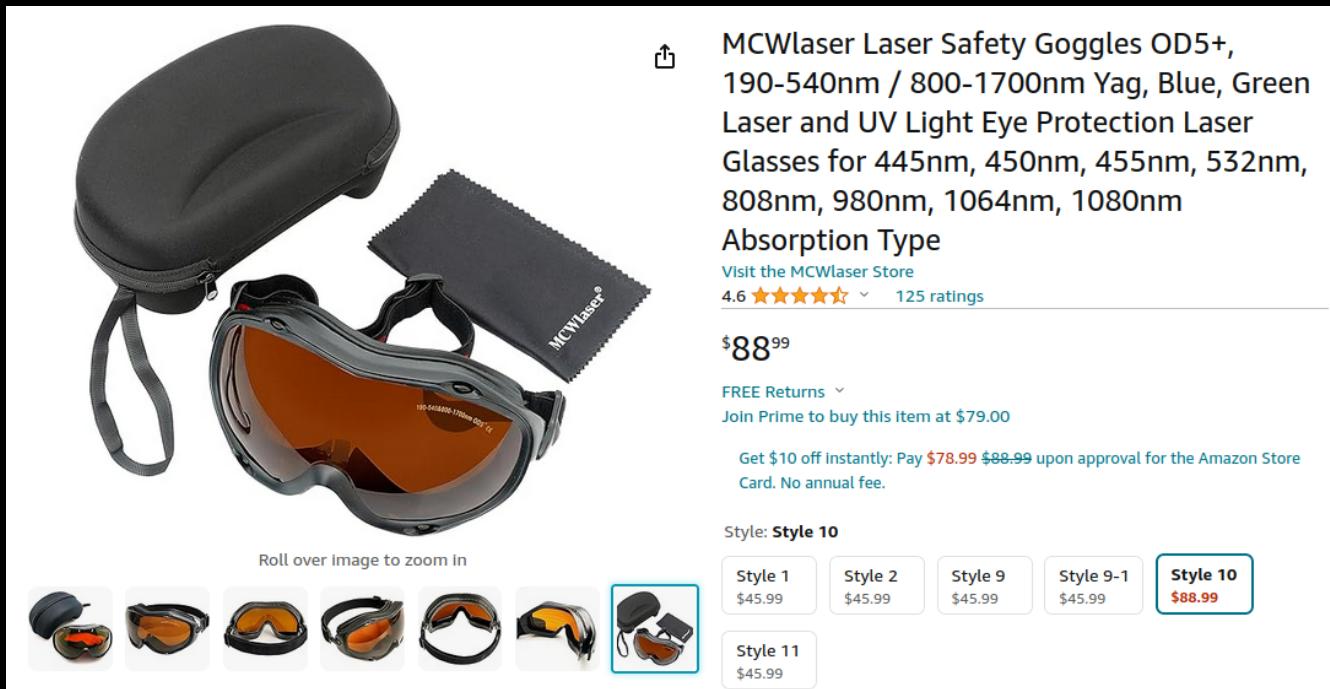

If you had to wear a balaclava to conceal your identity while you perform a special directed energy operation, which of these two would you choose?

This is why my second biggest recommendation after Eagle Pair, is Laserland.

Eye Raping:

This is my favorite section and my favorite weapon, the blinding, burning, seven watt infrared laser pointer. Humans can not see infrared. So, when you are looking at a spot pointed at by infrared lasers you will see a faint violet dot and then come to realize you can no longer see the color red, forever – then your fucking eyes explode. Directly looking at a infrared laser beam without laser safety goggles will pop your fucking retinas and fry your optic nerves before you realize what is happening to you. No world leader on Earth has laser safety goggles on, 24/7. No one anticipates being blinded by infrared lasers. It is not conventional at all so it isn't planned for. But make no mistake, infrared lasers are here and you can use them on your enemies.

Antifa adopted lasers because Hong Kong protestors used lasers. The cat is out the bag. Expect lasers to become used more often until some Jew cuckservative politician faggot tries to ban them. Antifa, for the most part, uses cheap green lasers (532nm wavelength) and medium to high quality blue lasers (445nm - 450nm wavelength)

In addition to the strapped Laserland 190nm-550nm strapped goggles, I recommend these for 190nm-540nm & 800nm-1700nm spectrums.

If you can not trust MCWLaser or Laserland, get a pair of Eagle Pair and wear them then test a 1W blue laser on the Laserland or the MCWLaser goggles. What you will want to see is the dot being reflected off the goggles. If the dot from your 1W or less laser is being bounced off the strapped on goggles, like a fucking mirror, your shit is good and will work. Check the reviews, do your own research, ask around on Laser Safety Forums and check the CE certification.

I recommend a full balaclava and not a half-face neck gaiter because facial features from the nose up can still be used to identify you and to a camera, infrared or not, these strapped goggles (snowboarding style) are still translucent. There may be a workaround to the fogging issue with the folding (sunglasses style) Eagle Pair goggles but I'm not sure:

Motorcycle helmets. If you can get a motorcycle helmet and wear sunglasses under them without them fogging under the helmet, then you would be able to wear laser safety glasses under them without the fogging.

Now, on the next section:

How to avoid deflection or reflections back toward you.

Avoid aiming at the following, if you can help it, yes even if you have goggles on, especially with any laser over 1W:

Puddles of water, reflection hazard.

Mirrors, reflection hazard.

Frosted glass, illumination hazard, gives away your position.

Planes, triangulation hazard. Aiming at planes doesn't even harm pilots unless you have some 1 or 2kW (kilowatt/thousand watt) powered shit mounted to a fucking car. It just gets you locked up for no reason. Never aim at planes or helicopters. Avoid getting jailed up over stupid shit.

Police (with a weak laser), enemy hazard. Yes, I know. What? Stop aiming at cops with these weak ass lasers because they call for backup and no if you do not have a Sanwu 7W type laser or a 15W CNC laser head module at the bare fucking minimum, they will not go blind and they will call for help to locate your ass. When you aim lasers at cops, if you don't have shit that is able to focus down to 0.1mrad beam divergence and is at least 5W at the very least, you are asking for problems. Same thing goes for....

Soldiers (with a weak laser), enemy hazard. This is even worse than aiming weak shit at cops. If you do not have some shit like this, don't even try aiming lasers at anything, just by a fucking gun at that point and copy the DC sniper setup but use a brass catcher and replace your ejector, extractor, firing pin and barrel. Shred the old ones in an industrial metal shredder and use a melting crucible to melt the brass shell casings:

How far is 0.1 MRAD?

The most common scope adjustment increment in mrad based rifle scopes is 0.1 mrad, which are sometimes called "one centimeter clicks" since 0.1 mrad equals exactly 1 cm at 100 meters, 2 cm at 200 meters, etc.

Wikipedia

<https://en.wikipedia.org/wiki/Milliradian>

Milliradian - Wikipedia

You need a CNC Laser Head Module with Battery Pack Setup so you can concentrate the beam to 0.1mrad. The tightest beam concentration. With a 15W, 20W, or 36W laser tightened down to 0.1mrad, you can cause pile-ups, blind enemies on the street, blind cops, soldiers, world leaders, armored truck drivers, anyone behind a bulletproof or see through window. Most laser safety goggles can only take a direct hit of 1W or less without damage. If you have a strong enough laser, you can attack other people with laser safety goggles. Their goggles will burn, blacken and melt, protecting them but also destroying them beyond repair. Most goggles can only take a sweep of the maximum their optical density protects from but most goggles will melt at strengths lower than this.

Eagle Pair® 190-540nm OD6 Standard Laser Safety Goggles Summary

Now upgraded to OD6! Eagle Pair® brand protective laser safety goggles for 190-540nm wavelength. These goggles have exceptional visible light transmission (rated at 50%) and yet protect to a level of OD6+ (reduce the intensity of 190-540nm laser light by a factor of 1,000,000 or more), and are CE certified. They are suitable for use with 405nm violet, 445nm blue, and 532nm DPSS green lasers that **DO NOT** produce significant amounts of unfiltered 1064nm infrared light. These Eagle Pair goggles may be used when looking at the spot created by a 1,000 watt or lower power laser on a non-reflective surface. However, you should **NEVER** look directly into a laser beam or its direct reflection even when wearing laser safety goggles. Eagle Pair laser safety goggles come with a cleaning cloth and protective case (case appearance may be different than that shown). **Note: These goggles are for personal use only, not for any commercial use that is regulated by OSHA.** [Click here](#) to download a graph of optical density (OD) vs. wavelength in nanometers for these goggles in PDF format.

But, I doubt you will be attacked by another person with a laser, nor will you encounter a normie glownigger or zogbot with laser safety goggles. Most glowniggers are ignorant to laser safety but they are slowly learning. So, imagine most municipal cops. The local yokel goon squad, including SWAT team bitches, are completely unaware of the existential danger of people with \$162.40 and/or \$31.85 in their pockets. In all likelihood, when you tote lasers, you will walk alone. You will be the sole laser expert in the field, in the trenches. Many will not know how to defend or protect against you. You will be a menace. If you are repilled on laser safety and CNC laser head modules as well as the importance of 0.1mrad beam divergence, then

you will be prepared to ravage entire cities. There is a lot I want to cover in this book. But, we have to go back in time first, to Page 9. What the fuck was that even? What could that have been?

This is an image I edited using a free png laser burst image layered over a stock image. But, what does it simulate, what does it represent? What is implied by this image? Well, this an overpass. What is an overpass?

Overpass

Bridge form :

A collage of images showing various types of overpasses. The images include: a simple single-arch concrete overpass over a road; a multi-level concrete overpass with multiple spans; a complex multi-level stack interchange; and a modern overpass with a decorative pattern on its underside. There is also a small image of a person standing under an overpass. A "More images" button is visible in the bottom right corner of the collage.

An overpass, called an overbridge or flyover in the United Kingdom and some other Commonwealth countries, is a bridge, road, railway or similar structure that is over another road or railway. An overpass and underpass together form a grade separation. Stack interchanges are made up of several overpasses. [Wikipedia](#)

An overpass is a bridge that goes over another bridge in a different direction. An overpass attacker is able to target the people below, heading towards them. With a laser, you will be able to get range on

the targets down below. With a 445nm laser carbine, you will be highly visible but it wouldn't matter.

2017 Interstate 75 rock-throwing murders

[Add languages](#)

Article [Talk](#)

[Read](#) [Edit](#) [View history](#) [Tools](#)

From Wikipedia, the free encyclopedia

In 2017, two people were murdered in separate incidents – one in Michigan and one in Ohio – when teenagers [threw rocks and sandbags](#) from two highway overpasses along [Interstate 75](#).

Michigan I-75 rock-throwing murder [\[edit\]](#)

Kenneth White, 32, was murdered on October 18, 2017, when a 6-pound (2.7 kg) rock was thrown by a group of five teens: Mikadyn Payne, Trevor Gray, Alexzander Miller, Mark Sekelsky and Kyle Anger. The rock crashed through the windshield of the van he was riding in on [Interstate 75 in Michigan](#), in Vienna Township, 80 miles (130 km) north of Detroit. Other cars were also damaged by rocks a group of four boys were throwing. All of the teenagers were from the [Clio, Michigan](#) area.^[1]

Murder of Kenneth White	
Location	Vienna Township, Michigan, U.S.
Date	October 18, 2017
Attack type	Murder by stone throwing
Weapon	Rock

It's powerful enough to permablind instantly.

This is something that has been happening for decades. Some dumb teen boys trying to have fun, some drunk asshole grabs a big rock or brick or cinder block and they time the cars below and chunk that shit down and it busts through the top of the car or the windshields.

This is what the end result looks like. It's pretty stupid if you ask me. The sweat and skin cells get on the rocks and bricks and these retardz throw them down onto cars below and leave them there. Imagine how retarded you have to be also to do this shit in the daytime, where all these people can see you.

These are real nigga attack hours. This is when it should be done, at fucking night.

Wear these, with a balaclava like this:

You need to be wearing all black. Some shit like pic related. A type of BDU or black combat fatigues.

You could even mount a 36W 445nm CNC laser head module onto an AR-15 and blind people and shoot them at the same time if you have some thick ass zip ties. But fuck that. I don't know shit about that. And it can expose you to NIBIN and ShotSpotter and then you would need to read Spin The Block.

Color: 1pc battery

Below are some photos of Laseranon's 445nm CNC Laser Head Module + 9800mAh battery pack plug and play setup – below:

Here you can even see under the red dot sight that the CNC Laser Head Module says Zeus on the left side. This is the 36W input, 8W output, focuses down to 0.1mRad beam tightness \$160+ laser module that has a plug for the 9800mAh battery pack. This setup gets very hot so you have to use a pattern of 60 on, 30 seconds off. There is a toggle switch on the battery pack that you can use for firing. Make sure you have 190-540nm OD6+ goggles for this laser. Do not aim at reflective surfaces and do not remove your goggles for any reason whatsoever until the job is done and the laser is unplugged.

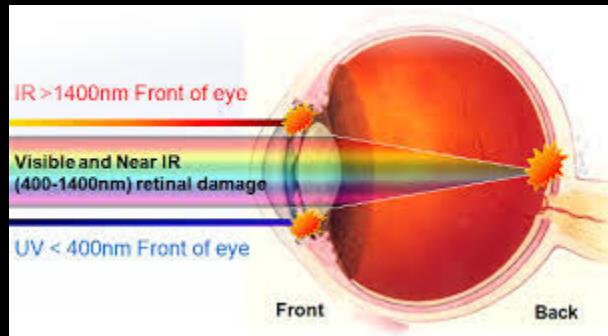

Yes, this laser head module is really, really strong. It can blind up to 1000' and looking at the spot on a wall or floor will blind you. Even your buddies. This is why you need to be alone or in a two man team when you do this. Both of you need some black fatigues and some MCWLaser or Laserland style strap on goggles rated for 190-540 or 190-550, with an optical density of 6+

Seeing Through The Goggles

To protect yourself from lasers, you need certain goggles, which are coated and chemically treated even on a microscopic level to deflect lasers, by specific wavelength. I can not stress this enough.

During a bright day or night, when looking at white streetlights or whatever, you will see these blue-grey dots in your vision, shown below. This is color polarization. It is safe, you will see this, even without a laser. You will be fine. After five minutes, you will get used to it. You will not go blind from this. It is a symptom of the compounds in the glasses that block out the 445nm wavelengths, like diffraction.

I own a pair of 190nm-540nm OD6+ Eagle Pair Goggles and 190nm-540nm & 800nm-1700nm OD5 Goggles. These (orange ones) will protect from invisible UV (190nm – 300 or so), Light Blue (400), Dark Blue (445/450/455nm) and Green (532). They do not protect fully against cheaply made DPSS (diode pumped solid state) 532nm lasers which use a 800nm near-IR diode with a converting crystal that changes the IR into 532nm Green. If you drop or damage a 532nm DPSS laser or get a cheap one or use it in the cold, you will experience an IR leak where the pure 800nm laser light comes through. This is why I have these 190-540&800-1700nm goggles as well to protect me from Green DPSS lasers fully.

Don't use a green laser in the cold!

1,956,926 views Aug 5, 2018

Some green laser pointers not only emit a bright green beam but also invisible radiation at a hazardous level! How do we make invisible radiation visible and how do you test your laser for this? Let's find out!

As you can see, 532nm (Green) DPSS leaks a lot of 800nm range IR light, typically 808nm. On an unrelated note, the best laser weapon to use would be an IR 800nm range CNC laser head module plug and play laser. But, you would need NVGs that can pick up infrared as eye protection. From there, you could turn on the NVGs, turn on your laser, aim and fire. The beam of such a weapon would be invisible. But the person in the car being fired at or on the street being fired at would see a faint pink dot taking up their eyes and if it was weak enough their red sensing cones in their eyes would be fucked and they could not see the red or pink colors. If it was strong enough like the lasers I think of (808nm, 5W, able to focus down to 0.1mRad), that wouldn't even matter because their eyes would just stop fucking working forever instantly as a whole after they see a faint pink dot for a split second.

Juicy Targets

Cargo Tanker Truck Types

Any type of tanker, cargo truck, ANYTHING with one of these diamond hazard placards needs to be the primary target for you to aim your laser carbine at

Incendiaries, Hazardous Gases, Explosives – these are the best ones.

Laser all these trucker, hazardous material moving ass niggers at night through their windshields and you will cause pure carnage.

You can't tell from the front of the truck what the hazardous material is.

For all you know, it could be heavy water or liquid nitrogen.

Just know that when you see a tanker down below, that's when you let the beam flow.

Hazardous Placard Colors					
 EXPLOSIVES 1	 FLAMMABLE 3	 NON-FLAMMABLE GAS 2	 OXYGEN 2	 INHALATION HAZARD 6	 DANGEROUS WHEN WET 4
Orange Explosive Materials	Red Flammable	Green Non-Flammable	Yellow Oxidizers	White Poisonous and Bio-hazards	Blue Flammable when exposed to water
 SPONTANEOUSLY COMBUSTIBLE 4	 FLAMMABLE SOLID 4	 ORGANIC PEROXIDE 5.2	 RADIOACTIVE 7	 CORROSIVE 8	 White and Black Stripes various nonclassified dangerous goods
Half Red and White Flammable when exposed to air	Red and White Stripes Flammable Solids	Red and White Flammable Organic Peroxide	Yellow and White Radioactive	Half White and Black Corrosive	

Explosives, Incendiaries, Radioactive Materials, Fuel-Air Explosives, Inhalation Hazards and Oxygen will cause the place to get lit up so you may either need to get the fuck out before you get btfo'd or you need to not only have a fucking pair of laser goggles but a Acid Gas and Organic Vapor Respirator Mask from 3M.

More on hazards here. Now, to my next section....

Labels, Placards & Markings

Labels

						
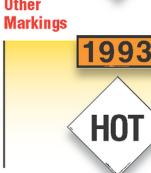

DOT Hazard Class labels are required on all packages containing hazardous materials. Labels must measure at least 100mm x 100mm and comply with the labeling section in 49 CFR, Part 172.400.	Subsidiary Risk Materials which meet the definition of more than one hazard class must display labels that correspond to both the primary and subsidiary hazard.	International Text is not required on primary or subsidiary hazard labels in Classes 1, 2, 3, 4, 5, 6 or 8. These wordless labels may be used to ship domestically as well as internationally.	Shipping Name Labels must be affixed to the surface (other than the bottom) of a package, and be located on the same surface near the proper shipping name marking. Labels meet both labeling (172.400) and marking requirements (172.300) of CFR.	Worded Bulk packaging, freight containers, unit load devices, transport vehicles and rail cars must be placarded on each side and each end with a minimum 250mm x 250mm placard as shown in 49 CFR, Part 172.500.	Bulk Packaging Must be marked with a placard and the 4-digit identification number specified for the material. The numbers should measure 88mm and may be displayed across the center area of the placard.	International Wordless For other than Class 7 and the Oxygen placards, text indicating a hazard is not required. Wordless placards may be used for domestic as well as international shipments.

Placards

Labels

CLASS 1 	CLASS 2 	CLASS 4 	CLASS 6 	CLASS 8 	CLASS 9 	Air Labels and Markings 
--	--	--	--	---	--	--

Placards

CLASS 1 	CLASS 2 	CLASS 4 	CLASS 6 	CLASS 8 	IMO Markings 
CLASS 3 	CLASS 5 	CLASS 7 	CLASS 9 	Other Markings 	

This is the type of shit that you need to be using for transport to the scene of the incendiary blood orgy

Attack Strategy And Carrying Your Castigator Carbines

You need to carry your shit in a backpack, with the 9800mAh 12V DC battery pack unplugged from the 36W input → 8W output 445nm CNC Laser Head Module, probably in a container. When you get off the bike, ATV, whatever the fuck, put the goggles on. You need to have a balaclava/ski mask on, with your laser safety goggles over it once you get off the vehicle. You may be able to drive with them but I do not advise it. I suggest that once you get a half mile or less from the staging ground, that's when you put the goggles on, over your mask.

Do some training beforehand that day and ensure you shit is focused to 0.1mRad. Charge your 9800mAh pack. Leave at night and go sliding for your mission. Once you have found an overpass bridge at an optimal time at night, get off.

When you are ready, take the 445nm laser head module out of your backpack and take the 9800mAh battery pack out of the separate compartments in your bag. Toggle the White on switch on the CNC laser head module. Plug up the 9800mAh pack into the 36W CNC head laser module.

Ensure your MCWLaser or Laserland 190nm - 540nm / 190nm - 550nm OD6+ laser safety strapped goggles are secure to your face, that your face is covered well, that your balaclava is not crooked, that you did not fuck up any of the instructions and so on. Pick a fast truck, car, or cargo tanker 18 wheeler.

Take a few deep breaths and make peace with your gods as you will need it for what comes next. Find and engage the toggle switch on the 9800mAh power pack, located here, with the laser head module aimed at the target. Target every vehicle's driver seat area for one to four seconds. Every minute, turn the laser off with the 9800mAh pack toggle switch to give the duty cycle a rest and prevent overheating. After a minute rest, reallocate targets and fire. Minute on, half a minute to a minute off. Target any and all cargo tanker 18 wheelers that may carry explosives, incendiaries, radioactive materials or corrosives.

Fuck em up.

Before all of this though, look up YouTube videos on the Zeus 36W Laser Head Module, how CNC laser work, ask around on Laser Pointer Forums but be vague, obviously. Act like a CNC machinist and laser hobbyist when you gain info.

Charging The Pack

Step 1 Open the battery switch, the light is red.

Step 2 Connect the plug, the plug light is green.

Step 3 charging, the plug lamp is red. When the battery is fully charged, the battery lamp is still red, the plug lamp turns green.

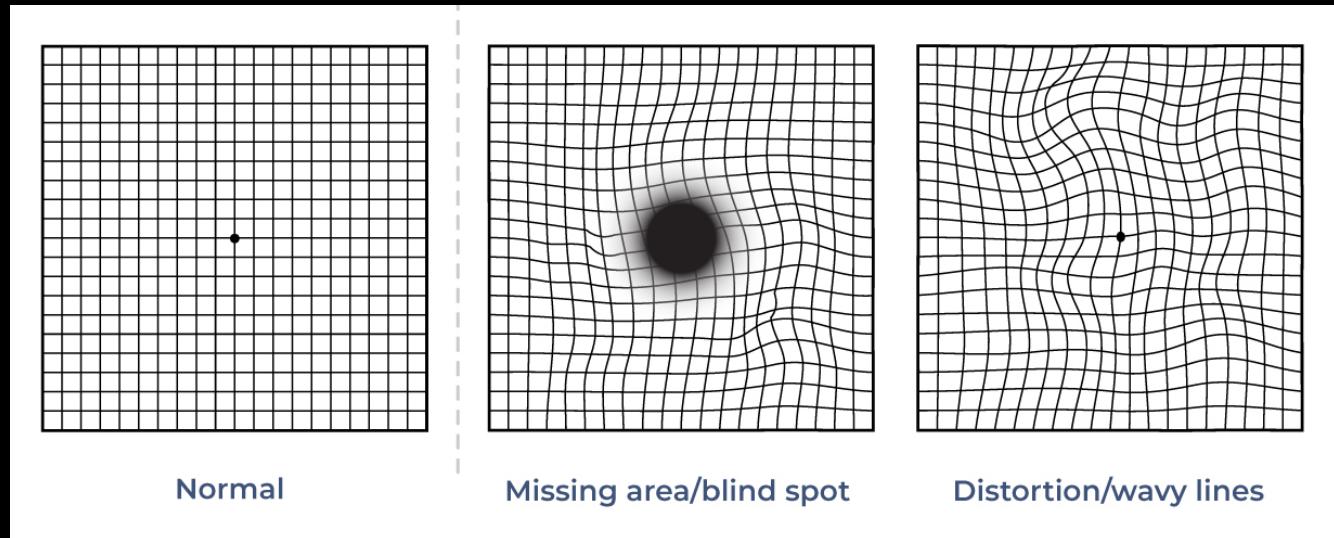

Step 4 WRONG!! NO open the battery switch. the plug light is green, the battery is not charging.

Toggle it on, plug it up and charge it. O is off. | is on. Toggle | downward to fire your laser when it is plugged up into the laser head module and to charge your pack when it is unplugged and separated from the laser head module.

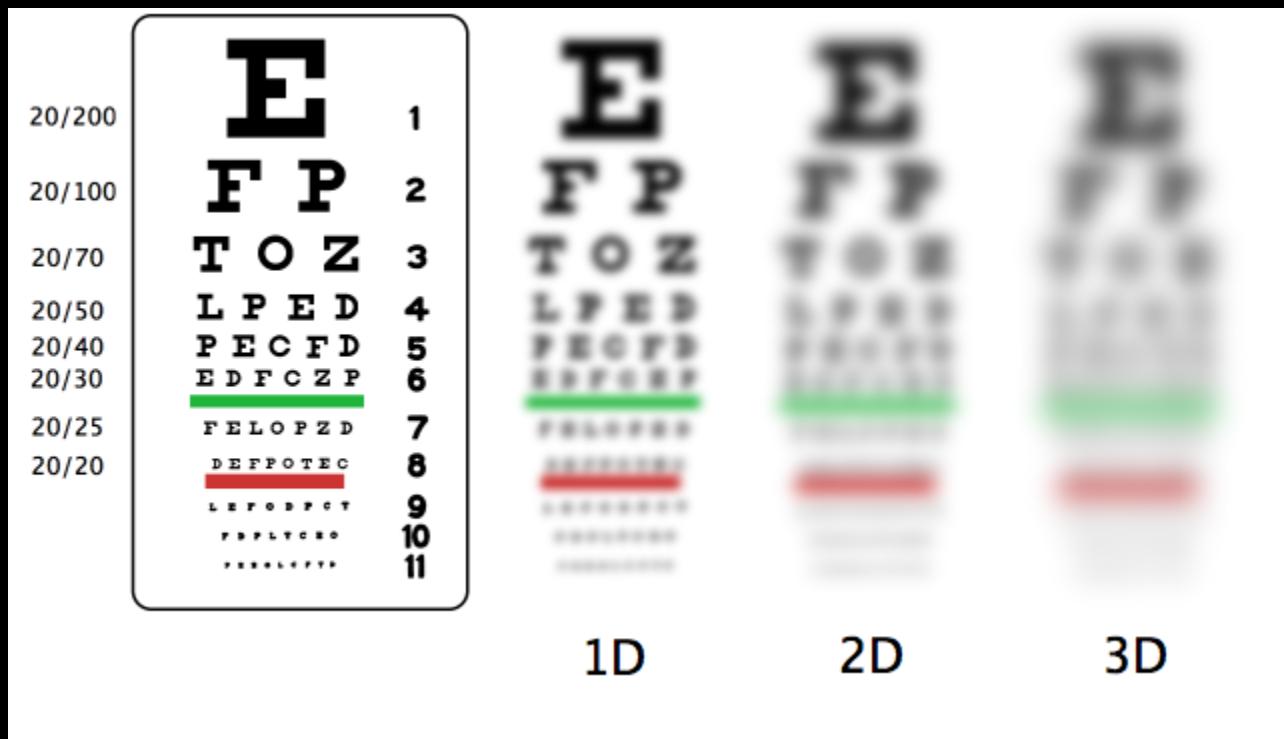

If you are smarter, you can use a heavy duty quadcopter drone with a laser mounted on it and descend the drone a little below the overpass but over the biggest vehicles to target the motorists more intimately and blind/kill them.

Self Protection

You need to test yourself and get an annual checkup at an ophthalmologist clinic. How can you test that you still have 20/20 visual acuity? You will need to pass a Snellen Chart and an Amsler Grid. I will include them in this document.

For the Amsler grid, you will want to see a normal result.

For the Snellen Chart, you want 20/20 or whatever your baseline visual acuity is.

For many Mulattos, this country is hell. That is why I wrote these books and I am not sorry for any of it. You get what you deserve. This book, like all my works, were so avoidable. But you had to keep pushing. I hope this book makes it clearer than all the others how much I hate the USA, Anglos and jews. This country is the gayest country on the planet. They will give faggots playing “make believe pronoun time” bills and laws and one drop us back to back to back.

Ain’t that a bitch. And our kind pays taxes here in this country. Lol. lmao even. Imagine funding pronouns on your wagecuck muttlatto dime in a country that says you are just a fucking nigger, topkek.

Part of why I wrote this book is because of Laseranon’s imprisonment. I am a disciple of Laseranon and I have immense respect for this man. He read my book Spin The Block. He knew about my books and read them so he would never have fucked up like that.

I don’t believe he did that shit to those two eskimo whale blubber chewing prairie nigger motherfuckers. They framed him for teaching anons about lasers. They framed him with his Absolution P80 and set his ass up while he was at the store. That man is innocent. Dillingham has framed this man. Alaska has failed him. The glowniggers have set him up. And just like that, the anons have forgotten him and he is a fleeting memory. A shitpost.

>I knew an anon that was based or was maybe schizo or maybe was a glownigger lmao ecks dee

A meme. A memory. A joke. He stood for these pussy whipped cucked faggots on /pol/ and tried to redpill them and they shit on him then and forget him now. Anons should be writing him letters every single fucking day in prison. Anons should be showing their support for him.

I respect him and I wish that this shit never happened to him.

Perhaps his imprisonment is the real reason I decided to write this book, more than anything.

Eagle Pair goggles are the way to go. The best in the field for the lowest price. This channel is inspired by /latpol/ from the latin speaking anons and also based as fuck laseranon. This channel primary is laser oriented. It is the best weapon. Depending on the angle, a 1 watt laser may have absolutely no affect on the target. They do not instantly go blind and someone can still see to knock you out or shoot you. Get Sanwu and Sanwu only and 3W+.

This room is also a part of the Novuteran Territorial Imperative/Mulatto Resistance/Archon rooms.

Before you purchase a laser, do the following:

- 0) Go to <https://www.laserpointersafety.com/rules-general/uslaws/uslaws.html> and learn the laws
- 1) Read TKVOTUSA (<https://archive.is/jnxls>)
- 2) Make a laserpointerforums.com account
- 3) Learn about laser wavelengths (colors), types, classes and power.
- 4) Ascertain what laser you want, the wavelength, power, class etc
- 5) Obtain the goggles for that wavelength and power.

Testing Illegal Blue Lasers And Making Them Even Stronger - Styropyro

9 05:39

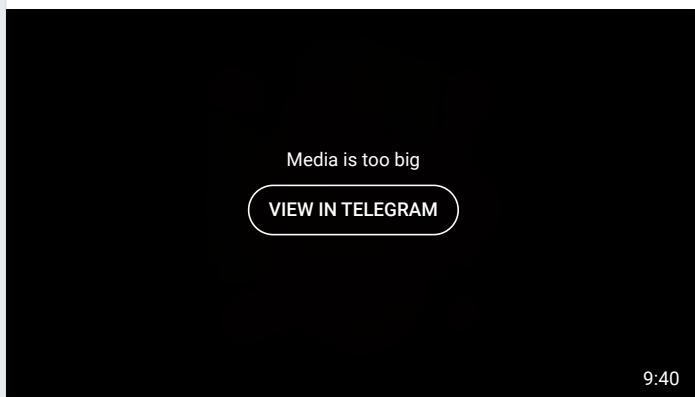

Ardens Ultrarubrum Lux Legio

Aiming at a plane is an automatic five years so do not even do it or try it. Aiming at a plane will only get you assfucked by niggers in jail. To be honest, it should not be a felony. Planes are too far for the laser to have any power on the pilot but it is a nuisance and it can make a low flying plane crash, so, I understand. Just don't do it. Read this. <https://www.laserpointersafety.com/menu-aviation.html>

To understand what it will be like to beam fools, first, you must understand what it is like to get beamed:

<https://www.laserpointersafety.com/protests/index.html>

<https://www.laserpointersafety.com/eye.html>

8 0 edited 05:43

Ardens Ultrarubrum Lux Legio

Having a laser is very much like having a fucking gun. But worse. Imagine a gun that can fuck up you, your target, and thirty people in the other side of the area of a city block - That's power. You have to know about beam divergence and also always account for what the fuck you aim at and what is behind it. Do they have a mirror? Does the car have a mirror? Is it raining?

<https://www.laserpointersafety.com/nodd.html>

8 0 05:46

Ardens Ultrarubrum Lux Legio

If you were interested in lasers, then heed my warning: One accident can cost you for the rest of your life. Never aim at:

- 1) Planes
- 2) Cops in a patrol car, with backup
- 3) Yourself
- 4) Your family, friends, gf, loved ones, your pets
- 5) Broken glass on the ground
- 6) Mirrors
- 7) A second pair of laser safety goggles directly in front of you that block your laser's wavelength. It's like aiming at a mirror.
- 8) Shallow puddles of water
- 9) A full water bottle
- 10) A metallic painted car, fence, thermos

9 0 05:50

Ardens Ultrarubrum Lux Legio

Never aim at a person (like a police officer or military) with a gun who is trained to see a laser as a lethal threat (laser sight for a gun), especially when your laser is weak as fuck. It will get you shot.

9 0 05:51

Ardens Ultrarubrum Lux Legio

190-540nm OD6 Eagle Pair Goggles will protect you from most of the shit Antifa has. They will not stop red lasers though. Why? Because red lasers are in the 600 - 700 wavelength. Near IR is in the 800-2000nm wavelength. True CO2 gas IR lasers are in the 10000/10600nm wavelength.

10  05:53

Ardens Ultrarubrum Lux Legio

Study <https://www.laserpointersafety.com/> months before buying laser goggles. Learn about lasers you intend to get before you get them.

9  05:54

Ardens Ultrarubrum Lux Legio

Read this before you get a laser as well. Treat a laser like an F-22 fighter jet.

Read the manual, simulate and then train, take exams and then fly.

To understand the wavelengths, you must understand basic science and math but to use a laser as a weapon you must be high IQ and respect the power of the weapon. That is all. You don't need a PhD for this.

Hidden Danger of Cheap Green Laser Pointers

Brainiac75's Video:

<https://www.youtube.com/watch?v=iR1Ku5dnH8&t=102s>

In this video I'm demonstrating the hidden danger of invisible IR light being emitted by cheap green lasers. Shoutout to Brainiac75 for the video inspiration! If you have any questions...

9 06:03

Ardens Ultrarubrum Lux Legio

<https://www.youtube.com/watch?v=iR1Ku5dnH8>

The issue with not only 532nm DPSS lasers but also 589nm lasers and 480nm lasers is that these lasers can not "naturally exist" All DPSS lasers are infrared lasers that pump infrared laser light into a crystal to convert the light to the desired wavelengths.

A DPSS laser in winter weather will not fire the intended color and will instead fire an infrared beam.

YouTube

THE ISSUE WITH GREEN LASER POINTERS

Some green laser pointers not only emit a bright green beam but also invisible radiation at a hazardous level!

How do we make invisible radiation visible and how do you test your laser for this? Let's find out!

I'm on Patreon now: <https://www.patreon.com/Brainiac75...>

9 06:06

Ardens Ultrarubrum Lux Legio

As shown here, in the "Novuterman" climate, a DPSS will not fire the intended color: <https://www.youtube.com/watch?v=9tOcUyakk0Q>

If your goggles do not stop infrared, you will have a bad day.

YouTube

Don't use a green laser in the cold!

Does a green laser pointer stop working when it is cold? Or does it turn into an invisible laser? That is nice to know for safety reasons if you are using a green laser pointer to point out stars on a frost-clear night.

And what about those decorations lasers...

https://www.survivallaserusa.com/Eagle_Pair_190-540nm_OD6_Standard_Laser_Safety_Goggles/p1667092_7862033.aspx

These stop 190-540nm. They will block the 532nm Green wavelength laser but not the 808nm infrared leakage of the 532nm DPSS laser coming through your goggles. It is imperative you watch Destructive Testing Of Laser Goggles, the very first video in this channel, to understand why that happens and why that is bad. Anything between 190-540nm being covered, you will be totally protected against 190nm, 191nm, 192nm.....300nm...400nm, 401nm, 402nm, etc, etc. all the way up to 532nm.

the Survival Laser USA Store

Eagle Pair® 190-540nm OD6 Standard Laser Safety Goggles

Now upgraded to OD6! Eagle Pair brand protective laser safety goggles for 190-540nm wavelength. These goggles have exceptional visible light transmission (rated at 50%) and yet protect to a level of OD6+ (reduce the intensity of 190-540nm laser light by a...

9 06:12

Ardens Ultrarubrum Lux Legio

These goggles have exceptional visible light transmission (rated at 50%) and yet protect to a level of OD6+ (reduce the intensity of 190-540nm laser light by a factor of 1,000,000 or more), and are CE certified. They are suitable for use with 405nm violet, 445nm blue, and 532nm DPSS green lasers that DO NOT produce significant amounts of unfiltered 1064nm infrared light. These Eagle Pair goggles may be used when looking at the spot created by a 100 watt or lower power laser on a non-reflective surface. However, you should NEVER look directly into a laser beam or its direct reflection even when wearing laser safety goggles.

https://www.survivallaserusa.com/Eagle_Pair_190-540nm__800-1700nm_OD5_Laser_Safety_Goggles/p1667092_11309188.aspx

These are 800-1700 and OD5. Because Antifa is highly unlikely to use NIR (near infrared) lasers and especially a high wavelength laser past 980nm, you will be safer with these. As there are virtually no 2000nm pointers, you are virtually safe from all lasers at a riot except for red lasers. To be safe from 4+ types of lasers is better to have no goggles and be safe from no lasers.

the Survival Laser USA Store

Eagle Pair® 190-540nm & 800-1700nm OD5 Laser Safety Goggles

Eagle Pair brand protective laser safety goggles for combined 190-540nm & 800-1700nm wavelengths. These goggles have 20% visible light transmission, protect to a level of OD 5+ (reduce the intensity of 190-540nm and 800-1700nm laser light by a factor of 100...

8 06:24

Ardens Ultrarubrum Lux Legio

Before and after using a laser (EVEN WITH GOGGLES) take an Amsler Grid and a Snellen Test exam. If you have an accident where you are exposed to your laser with your goggles off, seek immediate medical treatment. As hospitals do not have optometry equipment, you will be given a Snellen Test. Save yourself a trip, take the tests at home, set an immediate eye clinic appointment and get Optical Coherence Tomography done by an ophthalmologist. Still go for documentation's sake. In any event, take anti-inflammatory OTC (over the counter) medication. Use saline eye drops for any eye dryness you may have and eat tuna which is rich with vitamins and Selenium, which is good for eyesight. If they ask, you work with machining lasers. You must be ultra paranoid with how you handle the laser because all you need is one mistake. Treat it like a gun and you will be fine. Treat it like a flashlight and it's gonna be bad news bears.

138.8 KB

This is an Amsler Grid. 8 0 06:51

Ardens Ultrarubrum Lux Legio

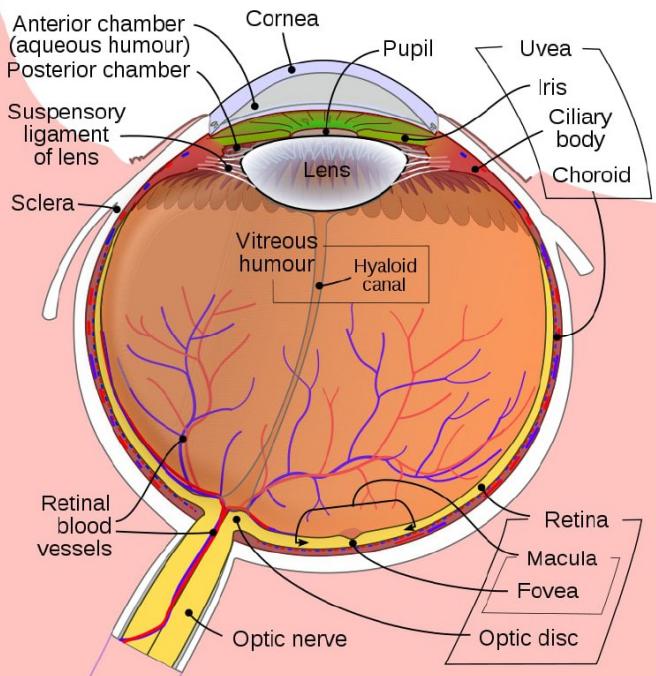

Normal:
Lines are straight

Abnormal:
Lines are shaded or distorted

All your results should be like the left. If you fired your laser and you didn't wear goggles and you looked at the spot or the beam or were even hit with a laser yourself, you will likely have macular degeneration or dark spots in your fovea.

8 0 06:53

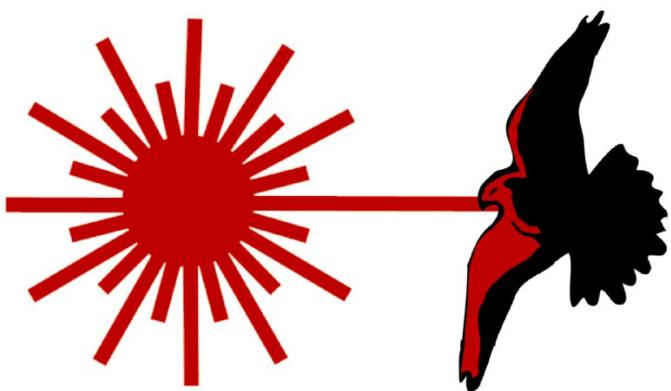

To understand a laser, first you must understand the eyes.

8 06:54

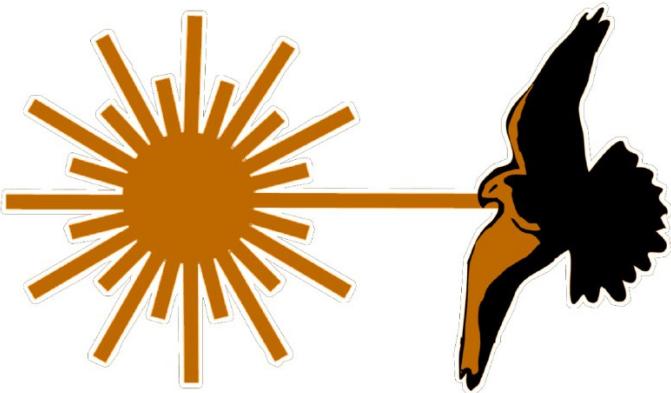

Each laserhawk or ocular assault specialist should have a general understanding of the eyes to be a basic or intermediate level ophthalmologist.

As a unit, each laser assault team should have basic common sense to not aim at each other, even as a joke and with goggles on. They should obviously follow the unwritten rules - Never aim your laser at yourself. Never fire unless all members have on their goggles. All people need to have the same goggles for the same wavelengths of laser. NEVER REMOVE YOUR GOGGLES WHILE HANDLING LASERS. If you find yourself suddenly under the influence of an aerosol hallucinogen or psychotropic compound, disassemble and toss the laser immediately or engage the safety, lest you become a danger to yourself or your unit.

Laserhawk, explained:

Noun, laserhawk - Basically a tactical plague doctor dressed anon that understands the Latin language and concepts of justice from the Roman era and is well versed in the application of the law, to the satisfaction of God and nature, with directed energy mediums such as seven watt lasers. A disciple of the laser wave dancer man of the path of light. The plague of our age is modernity, heresy, degeneracy - profligacy. The plague doctor would enter the environments and situations that the average doctor would refuse to fight the Bubonic Plague. They would do anything to stop the spread of the plague. Our modern plague is information warfare, optics and the PR spin our leftist enemies have at their advantage to demonize the right as a whole, Novuteman peoples and us as a group. The Laserhawk looks like a giant bird. He carries a laser. Under his beak mask, he wears Eagle Pair goggles. The Laserhawk fights corruption. The Laserhawk is fearless. He arms himself with the burning holy light of God to castigate the profligates and the moral heretics who push LGBT+, Zionism, Globalism and woke Marxist ideology. The Laserhawk beams people with lasers. This destroys evil forces and evil beings. Any man could be a laserhawk. Even a nigger. The Laserhawk understands laser safety and is responsible with his laser, treating it like a loaded firearm at all times and respecting the power of this holy tool. The Laserhawk is silent, invisible and vanishes as quick as he appears. He is neither traced nor foreseen. He does not brag or boast. He is a servant of God and he commits to serving God and natural law as he is under the oath of the cloak.

Amsler Grid

Use this Amsler grid to check your vision every day.

How to use:

- Wear the eyeglasses you normally wear when reading.
- Position the chart 14 inches away from your face.
- Cover one eye at a time with your hand.
- Stare at the dot in the center. Do not let your eye drift from the center dot.
- Contact your eye care doctor immediately if any of the straight lines appear wavy or bent, any of the boxes differ in size or shape from the others, or any of the lines are missing, blurry or discolored.

Monitoring your vision every day is important - print out this grid and keep it in a convenient place.

Visit MyVisionTest.com to test your vision with an online computerized version of the Amsler grid.

Snellen Eye Chart

Home use of this Snellen eye chart will help you determine the clarity of your distance vision. This can be useful to screen children for nearsightedness, which causes blurry distance vision. The chart also can help you determine if you meet the legal visual acuity requirement for a valid driver's license (20/40 in most states).

DIRECTIONS FOR USE

For the best accuracy (and to prevent memorization), have someone assist you when testing your vision with this eye chart. If you use eyeglasses or contact lenses for driving or other distance vision tasks, wear them during the test.

1. Place the chart on a wall or easel 10 feet away.
2. Cover one eye with your hand, a large spoon or some other item that completely blocks the vision of the covered eye. (Do not apply pressure to the covered eye, as it might affect that eye's vision when you test it.)
3. Identify a line on the chart you can comfortably read. Read the letters on that line aloud. Have your assistant stand near the chart and record your accuracy.
4. Continue trying to read the letters on each successively smaller line. Do not squint.
5. Have your assistant stop you when you fail to correctly identify at least 50 percent of the letters on a line.
6. Switch to the other eye and repeat.

Record your visual acuity for each eye by noting the line for which you correctly identified either:

- a) More than half the letters on that line, but not all of them.
- b) All letters on that line, plus a few letters (less than half) on the next line.

Examples:

If you correctly identify five of the seven letters on the 20/32 line, your visual acuity for that eye is: 20/32^{-2/7}
If you correctly identify all seven letters on the 20/32 line and three of the eight letters on the 20/25 line, your visual acuity in that eye is: 20/32^{+3/8}

DISCLAIMER:

Eye charts measure only visual acuity, which is just one component of good vision. They cannot determine if your eyes are "working overtime" (needing to focus more than normal, which can lead to headaches and eye strain) or can they determine if your eyes work properly as a team for clear, comfortable binocular vision and accurate depth perception.

Eye charts also cannot detect serious eye problems such as glaucoma or early diabetic retinopathy that could lead to serious vision impairment and even blindness.

Only a comprehensive eye exam performed by a licensed optometrist or ophthalmologist can determine if your eyes are healthy and you are seeing as clearly and comfortably as possible.
